About SEQR

SEQR (se•cure) is a system for mobile payments. Its flexible platform works in almost any payment situation. Key factors are security, speed, accessibility and usability. SEQR offers the ability for user interaction, through the SEQR app, with an almost limitless range of functions in connection with shopping and payments.

Thanks to the Seamless transaction switch and personal digital identification based on verified security standards, a very high level of security is achieved with a low transaction cost.

The SEQR technology uses a unique ID (QR code and NFC tag) on the frontend (to match buyer and seller) and the transaction switch on the backend. All transactions in the system require connection to the SEQR payment network for clearing in real time.

To become a SEQR user, the consumer must have a mobile phone/device that can run the SEQR app. To conduct transactions, the consumer must have data coverage via mobile phone/device at the time of payment. The SEQR user simply scans the QR code at the cash register with the app and confirms the payment with the PIN code. Fast, easy and secure. And the merchants reduce their transaction costs by 50%.

Activate SEQR in BRP

These are examples of descriptions and suggestions of pictures to be added for activation of SEQR in your cash register system, that is how to

register QR codes in the admin computer

place the codes visible to the customer

Place the QR codes visible to customer

The QR code stickers that you have received must be placed so that they are visible to the customer. Adjust the placement of the stickers according to your system and for best possible availability.

Note!

Activate the QR codes before you place them!

The QR code placed at the cash register is unique to that specific cash register and cannot be replaced with a QR code belonging to another cash register. If you have several cash registers, mark each QR code sticker on the back side with the cash register name so that it is clear which cash register the QR code belongs to. If the QR code needs to be replaced, contact Seamless to get a new one.

Add a picture on how it looks when the sticker has been placed at your cash register!

Payments with SEQR

These are examples of descriptions and suggestions of pictures to be added for different payment methods; that is, in the

cash register

Payment in the cash register

These are examples on how to receive payment with SEQR in the cash register.

The cash register startup view looks like this:
